

Questionnaire Features

For Supplier Compliance & Risk Management

1

Standardized

Trust Your Supplier (TYS) works with a conglomerate of major buying organizations to develop & maintain questionnaires that are standardized within and across industries.

These questionnaires are kept up to date to reflect new requirements & regulations while reducing the number of overall questions suppliers are required to complete.

2

Custom

Organizations may have unique regional and global requirements for risk management. TYS offers custom questionnaires to support any regulatory requirements that may not be covered with a standardized questionnaire.

3

Groups

Any combination of questionnaires can form a Questionnaire group. These groups can be based on common requirements for location, product or service, or other features.

During the onboarding process, suppliers can easily be assigned into the appropriate Questionnaire Group, simplifying the process and ensuring the relevant questionnaires are required for that supplier.

This strategy targets segments of suppliers for customized risk assessments appropriate for that segment.

4

Automated

The TYS approvals workflow can be customized and automated with each questionnaire.

Each supplier answer can be “scored” based on your internal risk threshold. Any answer that does not align with your company’s preferred score will then be directed to the appropriate team role for further review and approval.

This allows your team to focus on *undesirable* answers rather than spending time reviewing *every* answer.

5

Predictive

Buyer teams can create a set of rules that will predict which questionnaires should be assigned to a particular supplier

This is tremendously valuable as new compliance regulations and laws come into play throughout the world, and provides the opportunity to reach more of your supplier base without further manual outreach.

6

Dependent

Buyer teams can create a rule to assign questionnaires based on supplier questionnaire responses.

This keeps the number of questionnaires sent to suppliers at a minimum by assigning them additional questionnaires only when their response necessitates it.

7

Internal Due Diligence

Internal Due Diligence checklists are an easy way for teams to stay in sync with tasks.

These internal questionnaires are customized by your team and then used to manage tasks such as a review for your procurement team to confirm or additional tasks required outside of TYS when ready to onboard a supplier.
